

**ABSTRACT**

The abstract is replaced, as shown on page 29. A clean copy is shown on page 30.

**ABSTRACT OF THE DISCLOSURE**

~~—An adjustable Hanging Sports Equipment holder advantageously is hung from a wall or a ceiling by a hanging device, formed from a durable yet formable material comprising of a plurality of circular openings on the body of the apparatus to insert and obtain sports equipment. The said invention exhibits the ability to be shortened and lengthened according to the user's available space. The elongated tubular embodiment advantageously allows multiple sports equipment to be stored and retrieved by utilizing the top and bottom elasticized openings as the sports equipment is inserted into the adjustable hanging apparatus. A preferred embodiment includes means for supporting basketballs, soccer balls and the like, also a means for an air pump holder as well as one or more pockets for storage of needle valves and pins.—~~

**ABSTRACT OF THE DISCLOSURE**

An adjustable holder for sports equipment is disclosed. The holder is comprised of tubular material with elasticized openings at the top and bottom of the tubular material, at least one opening in the tubular material, a hanging structure attached to the top and an internal structure for adjusting the length of the tubular material. The holder is further comprised of at least one sports ball.
